**HUADIAN LIGHTING**

# ABOUT HUADIAN LIGHTING

Founded in 2013, HD Lighting has been a Leader for Sports Lighting in China. We pride ourselves on manufacturing high-end LED lighting, specializing in sports lights, floodlights, street lights, area lights, and high bay lights, showcase our comprehensive expertise in sports lighting. since 2018, HD has been Top 2 supplier of LED sport lights in China, In 2023, the total turnover of HD Lighting reached **88.2** million US dollars.

Our state-of-the-art R&D and production facilities with an area of 500,000m<sup>2</sup> in Shenzhen and Jieyang are staffed by a skilled team of over **69** engineers, **50** sales representatives, and **30** QC personnel, ensuring top-notch product quality and customer satisfaction.

Until now, we have completed more than **3030** projects across 63 countries and currently hold more than **150** patents. Our Ambitious goal is to become a top 10 global lighting brand supplier, delivering innovative and sustainable lighting solutions for stadiums, outdoor venues, and industrial sectors worldwide. We are committed to being a reliable partner for all customer who chooses HD through continuous research, exploration, and case summaries.

## RELIABLE TEST

We have our professional laboratory and collaborate with the CNAS laboratory for rigorous testing. Our tests include the Integrating Sphere Test, Salt Spray Test, Water-Proof Test, Surge Test, Constant Temperature And Humidity Test, Safety Test, Drop Test, Explosion Proof Test, G3 Vibration Test, Wind Resistance Test, EMI Test, Aging Test, RoHS Test, High And Low-Temperature Tests, among others.

Integrating Sphere Test

TEMP & HUMI Test

IES Test

3G Vibration Test

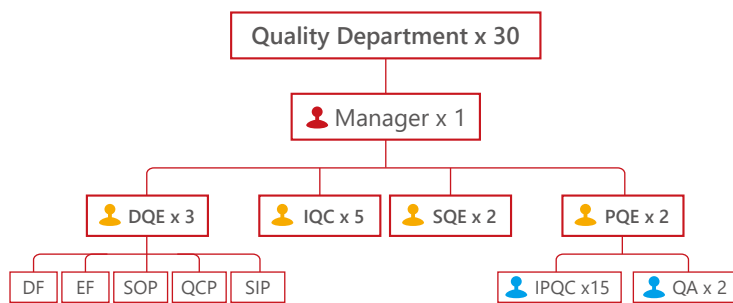

Water-Proof Test

## QUALITY CONTROL

30 QC personnel, ensuring top-notch product quality and customer satisfaction. We perform various quality checks, including first-piece inspection, incoming inspection, lighting and electrification tests during production, aging tests, and finished product inspections.

**IQC → IPQC → OQA**

## CERTIFICATES

All our products meet CE and RoHS requirements and are UL, DLC, SAA, FCC, ETL, CB, ENEC, GS, TUV, D-Mark, RCM, etc. certified in different countries and regions worldwide.

## PATENTS

HD Lighting holds 113 patents currently.

# OVERSEAS FACTORY SUPPORT

HD established factories in Vietnam and Mexico in 2023, it is good news for all customers, as it means less risk and more cost-effective production. Establishing a factory in a foreign country can provide access to new markets. Companies can reduce transportation costs and delivery times, setting up production facilities closer to these markets.

## VIETNAM FACTORY

Vietnam Huadian Electric Co., Ltd. is conveniently located in the Dinh Vu-Cat Hai Economic Zone of Haiphong, northern Vietnam's largest port city. We're just 10 kilometers from the airport, 241 kilometers from Guangxi's Dongxing Port in China, and 120 kilometers from Hanoi. Being close to important transport hubs helps us quickly meet our client's needs and deliver products on time, building strong, reliable relationships.

Size: 5,400m<sup>2</sup>

Employees: 150+ (6 from China). As the operation grows, more operatives will be hired.

Production capacity:

- >> Sports and flood light 20000 pcs/Month.
- >> High bay and area light 32000 pcs/Month.
- >> High mast light 18000 pcs/Month.

## MEXICO FACTORY

Size: 1,300m<sup>2</sup>.

Employees: 40 (Administrative and Operatives). As the operation grows, more operatives will be hired.

Production capacity:

- >> Sports and flood light 4500 pcs/Month.
- >> High bay and area light 15000 pcs/Month.
- >> High mast light 4000 pcs/Month.

Capacity: Operating at approximately 35% production capacity.

# SP06

LED sports light series which widely used in stadium, sports field, high mast lighting, light tower, ports...

**IP66**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

SP06 is a round stadium light with highly cost-effective. The illumination of sports fields is crucial to their design and construction. It not only ensures the smooth running of games but also enhances the safety and comfort of both players and spectators. The power range covers 300W-1200W, SP06 is widely used in stadiums, sports fields, high mast lighting, light towers, and ports. No Flicker, Ra90 & TLCI 90, it also suitable for the high-definition broadcast of the arena. With die-casting fin heat sinks, increased heat dissipation and a longer life span of SP06 series sports lighting. Design integral structure water-proof may guarantee waterproofing stability effectively. The precision aiming device will assist in precisely aligning the light to the aiming point. The visor is specially designed to control the lighting direction effectively, improve glare, and reduce the light impact on the residential during the application.

# SP02

Cost-effective LED sports light series. Suitable for Sports & recreational fields, Large-scale outdoor events, Industrial and construction sites, Parking lots and garages, Crane lighting, Security & outdoor surveillance.

**IP66**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

**RoHS**

HD's LED round sports lights offer remarkable cost savings and stand as one of China's top-selling exported sports lighting solutions. The fixture boasts a heat sink crafted through a cold forging technology, which facilitates rapid heat conduction, ensuring highly effective heat dissipation. The high permeability lens made a higher light efficiency while minimizing light loss. Multi-sided optical design reduces glare and controls light uniformity. This can help enhance the performance and efficiency of the sports light. Both LEDs and the driver have a separate design that does not interfere with each other. Distance between the heat sink and the driver (110mm) ensures the driver away from the heatsink heat effects. This can be critical in maintaining the lifespan and reliability of the driver and reducing light attenuation. The SP02 model introduces an integrated structure with an IP66 waterproof rating, ensuring the consistency of waterproofing capability. Suitable for a wide range of indoor and outdoor applications.

750W/ 800W/1000W/ 1200W

**Wattage Selectable:** 800W-1000W-1200W

300W/ 400W/ 500W

**Wattage Selectable:** 300W-400W-500W

## Friendly Structural Design

Our engineers have professional experience in case practice, designing an U-bracket to help it easy to install and maintain. Angle adjustment structure to help the light rotate 0-240° horizontally and 0-200° vertically, which can use more flexible for the use of large professional stadiums.

## Super Heat Management

Both LEDs and the driver has a separate heat sink that does not interfere with each other. Distance between the heat sink and the driver (110mm) ensures the driver away from the heatsink heat effects. This can be critical in maintaining the lifespan and reliability of the high-power driver and reducing light attenuation.

## No Electrical Interference

Design a state-of-the-art circuit system that works harmoniously with other systems, while generating ultra-low EMI noise and minimizing electrical interference.

## SSD for LED Chips

Solid State Design" (SSD) for LED chips is simple, durable, and reliable. It makes easier manufacturing processes, lower manufacturing costs, and increased efficiency. The absence of non-removable components in a solid-state LED design reduces the likelihood of failure due to component degradation or damage. Without external connectors or wires that could fail, the LED chip becomes more reliable, minimizing the need for replacements or repairs.

## High Light Efficiency 145Lm/W, 150Lm/W Optional

The light efficiency has 145 Lm/W and 150 Lm/W optional, which makes the SP02 integrated high-power sports lights can cater to different lighting projects and provide customers with the ability to choose the most appropriate light efficiency based on their specific needs and priorities.

Classic round sports lighting solutions, applicable to professional-level or even in FIFA sports courts, civil training grounds, airports, docks, and other large places.

## FL35

FL35 is an epoch-making solution for a wide range of LED sports lighting applications.

**IP66**  
Wet Location

**IK10**  
Rating

**5YEAR**  
WARRANTY

The product is available in lens and glass+lens options to adapt to more harsh environments. The FL35 has a maximum luminous efficacy of 170LM/W, especially suitable for new sports stadiums, large outdoor plazas, indoor plazas, harbors, etc. The 1800W glass model is only 23.5kg, which is lightweight and conducive to quick installation by after-sales maintenance personnel. The special process of one-piece molding heat sink, heat dissipation area of 345mm<sup>2</sup>/g, superior heat dissipation performance, increase the use of product life.

1260W/ 1560W/ 1650W/ 1800W

## Integrated Lens and Heat Sink Design

The product features an integrated lens and heat sink design, ensuring that all components are tightly connected, providing excellent overall performance and stability. Its simple yet elegant appearance not only showcases a modern design aesthetic but also effectively optimizes the structural layout, making it more robust and durable.

Without Visor

With Visor

With Louver

## Lens Lighting Optional Solutions

The maximum luminous efficacy of FL35 is 165LM/W, especially suitable for new stadiums, large outdoor plazas, indoor plazas, harbors, etc. FL35 has two optional solutions, lens and glass + lens, lens plus glass can be applied to more severe environments, effective dust and corrosion protection, to ensure that the fixtures work for a long time with stable performance.

Lens

Glass+Lens (Optional)

## Pure Aluminum Heat Sink

Featuring a pure aluminum heat sink with excellent thermal conductivity, the design effectively dissipates heat generated by the high-power light during operation. This ensures stable performance even during long hours of high-intensity use. The efficient heat dissipation significantly reduces light decay, thereby extending the lifespan of the light.

## Aluminum Alloy Mounting Bracket

The product's mounting bracket is made of aluminum alloy, making it lightweight yet sturdy. Its excellent corrosion resistance allows it to withstand harsh environments, such as moisture and salt, ensuring the long-term stability and durability of the light fixture.

## Photometric Diagrams

## ① Visor

Visor Helps to Accurate Light Control, Dramatically reduces glare and spill.

## ③ Scaled Angle Adjustment

Equipped with a scaled angle adjustment feature, allowing for more precise adjustment and recording of the light fixture's angle, significantly improving the efficiency and convenience of installing multiple fixtures.

## ⑥ Built-in Junction Box

The product comes with a built-in junction box, simplifying the wiring process and ensuring a safe and quick connection. Users can easily complete the installation, reducing time and costs while improving the overall neatness and safety of the installation, making it suitable for various complex environments.

## ② Precision Aiming

The precision aiming device will assist in precisely aligning the light to the aiming point, which makes your work much easier and highly efficient.

## ④ Power Cable

Installation is labor-saving and efficient, and quick disconnect safety facilitates driver box maintenance.

## ⑤ Safety Rope

The safety line is equipped to help improve the high altitude installation coefficient, to prevent the lamps and lanterns from falling off during the installation process or long-term use to reduce the safety hazards.

# FL26

FL26 LED Flood Light Replace The Lens Quickly.

**IP66**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

CE CB

RoHS

FL26 LED Flood light is a premier choice for professional Flood lighting in expansive outdoor venues, catering to diverse fields including football, golf, baseball, tennis, swimming, volleyball, and even extending to specialized locations like ski resorts, airports, ports, and parking lots. With a rich history of successful project implementations and leveraging cutting-edge technology developed by our team of engineers, FL26 excels in both performance and efficiency, surpassing conventional Flood lighting solutions in user-friendliness and cost-effectiveness.

600W/ 700W/ 800W

1400W/ 1500W/ 1600W

## Small Size, Light Weight Helps to Ensure Small Wind Resistance

Weight is only 17.97 kg (without Visor), and small size, EPA value of the lower side is only 1.57 ft<sup>2</sup> with Visor. These make the packaging sizes small, reducing the packaging space and transportation costs.

### 3-IN-1 Wattage Selectable

3-in-1 power adjustable 1400W-1500W-1600W and 600W-700W-800W to meet the different markets.

### Photocell Available

Added NEMA sensor connector compared to the usual stadium flood lights, 3/5/7pin light sensitivity can be matched, the customers can choose flexibly according to the selection application.

## Quick Lens Replacement, Helps to Keep the Inventory Healthy.

Employing a snap-on structure without tools and screws, the cover can be swiftly detached, and the lens promptly replaced. This feature aids distributors and agents in streamlining inventory management and alleviating stock pressures.

## ① Humanized Handle Design, Easy to Install and Handling

Behind the heat sink of the FL26 sports light, is designed with a handle that conforms to the ergonomic palm, this makes the light more convenient to install and handle and enhances the simplicity and convenience of installing. It is also worker-friendly and improves safety for high-altitude installations.

## ② Easy External Wiring

Design an external junction box that incorporates a reserved wiring position along with a waterproof male-female joint. This can simplify the installation process and save precious time. Also, the wiring box ensures convenient operation and provides a secure and waterproof connection, ensuring the durability and reliability of the lighting system.

## ④ Visor from Experience

The visor is designed to trim the excess upward light for excellent control of spill light and limitation of glare. The Visor has a built-in reflection structure, making less light loss, and good light uniformity.

## ③ U-bracket installation is easy, safe and reliable.

The U-shaped bracket is easy to install, the angle adjustment is flexible and labor-saving, and the nut fixing has high strength to withstand outdoor wind pressure, ensuring stability and reliability.

The Visor is fixed by two screws and a U-shaped slot, which reduces the time cost of assembly and makes the operation more convenient. Installing and adjusting the visor is safer and labor-saving.

# Marvel X (FL19)

The Marvel X provides perfect sports lighting solutions whose wattage can be adjusted from 600W-700W-800W, especially friendly for new stadiums. Also, Marvel X can be compatible with the wiring and electrical requirements of the current main street, which makes it can 1:1 replacement for the HID.

**IP66**  
Wet Location

**IK10**  
Rating

**5 YEAR**  
WARRANTY

**RoHS**

800W Marvel X ONLY 17.2kg, 15% -20% lighter than the same power output sports light in the industry. Lighter equipment can improve mobility reduce set-up and take-down times, and make it to facilitate the installation of workers. HD's engineers took into account the installation process of the lights and developed innovative structures to enhance worker comfort and safety. This focus on ergonomic design can lead to improved efficiency during installation, ultimately saving time and costs.

**Wattage Tunable: 600W-700W-800W**

## High Efficiency & Low Cost

① The powerbox and the heat sink components have separable designs, through the self-locking screw, they can be assembled and disassembled quickly. This reduces downtime & saves costs in future maintenance and upgrading.

② When the high altitude maintenance of Marvel X, the power box is separated from the lamp body, a knife switch cuts power automatically immediately, this provides safety for workers.

③ PowerBox is also a junction box that can be convenient and fast wiring.

## Excellent Heat Dissipation

The vents help the air convection to dissipate heat. A high thermal conductivity aluminum heat sink can quickly spread out the heat. So the low junction temperature during high power operation has ensured a long life and stable performance of LEDs.

## Surface Treatment

Corrosion-resistant surface treatment is applicable to the air environment in more harsh areas.

## 4 Visors for Your Choose

Multiple visor lengths and reflector options allow for precise light control.

### Visor Helps to Accurate Light Control

- Directs more light onto the field.
- Dramatically reduces glare and spill.
- Enhance on-field playability.

### PC Lens

High-temperature-rated and high transmittance lens materials for less light loss and a long span life, multiple beams spreads to meet custom project requirements, and provide maximum light control.

### Sensor Interfaces

DMX, Zhaga, DALI, 0-10V Dimming Optional.

### Handle

Comfortable silicone handle for easier installation. improves work efficiency and safety.

### Driver

Single integrated driver, simple wiring & operation, effectively reduce maintenance time and cost.

# Help to Keep Inventory Healthy

Only 288\*620\*340mm and 17.2kg without visor, compact size, and Light weight save freight cost and easy installation. Package size is only 655\*470\*325mm, which makes less shipping cost and more benefits Perfect choice for a distributor or wholesaler stock.

-  Quick shipment of required product
-  Elimination of dead stock
-  Less blockage of funds
-  Less storage space required

# FL19 PLUS

## LED Stadium Lights

The FL19 PLUS is a cost-effective sports lighting solution for the stadium, which can 1:1 replacement for the HID and is also friendly for new stadiums.

## LENS

High-temperature-rated and high transmittance lens materials for less light loss and a long span life, multiple beams spreads to meet custom project requirements, and provide maximum light control.

## Opto-electric Separation

Opto-electric separation solutions make the driver separate from the heat sink, extending the overall lamp life.

## Corrosion Resistant Surface Treatment

T19S adopt surface powder coated, which has strong corrosion resistance, suitable for the air environment in more harsh areas, especially in coastal cities.

## Lightweight Stadium Light

The light weight of the stand-alone modules, weighing only 19.5 kg for the 1000W module and up to 23 kg for the dual mode 1800W module, greatly simplifies installation.

## Excellent Heat Dissipation

The vents help the air convection to dissipate heat. A high thermal conductivity aluminum heat sink can quickly spread out the heat. So the low junction temperature during high power operation has ensured a long life and stable performance of LEDs.

## Small Size to Reduce Costs

Small size make a small wind resistance, reduce packing size, and save transportation space and freight.

Quick shipment of required product

Elimination of dead stock

Less blockage of funds

Less storage space required

## Mounting (Options)

### U-Bracket Mounting

### Top Mounting Arm Mounting (Optional)

## Product Features

- 1 All structures are made of AL, the whole Light corrosion resistance is higher and can be applied to harsh environments, such as the seaside environment.
- 2 The max light efficiency is up to 160 LM/W.
- 3 The 1800W (two-mode) light body is only 23 kg, without a driver.

## Opto-electric Separation

The FL19 Plus features a opto-electric separation design that keeps the driver separated from the heat generated by the sink, minimizing the impact of heat on its performance. Furthermore, the driver box mounting bracket allows for flexible installation in any suitable location. Additionally, the driver can be conveniently installed in a distribution cabinet, providing ease of maintenance and labor savings.

**IK10**  
Rating

**5 YEAR**  
WARRANTY

**RoHS**

The FL19 MAX is a cost-effective sports lighting solution for the stadium, which can 1:1 replacement for the HID and is also friendly to the new sports fields. Opto-electric separation solutions are advantageous to the flexible installation of the power supply, which can be installed on the lamp holder and the lamp post, and can also be installed on the distribution box, for the convenience of installation and later maintenance.

1000W/ 1200W

1600W/ 1800W/ 2000W

## FL19 Multiple Functions Available

DMX, ZHAGA, dial code to adjust the power, SYNAPSE wireless control, can be installed with NEMA light control base.

## 15%-20% Lighter Than Other

1200W Max ONLY 21kg, 15% -20% lighter than the same power output sports light in the industry. Lighter equipment can improve mobility reduce set-up and take-down times, and make it to facilitate the installation of workers.

## Optical Lighting Program

1. With high transmittance lens alone.
2. Lens with tempered glass.

## Excellent Heat Dissipation

The vents help the air convection to dissipate heat. A high thermal conductivity aluminum heat sink can quickly spread out the heat. So the low junction temperature during high power operation has ensured a long life and stable performance of LEDs.

## Surface Treatment

Corrosion-resistant surface treatment is applicable to the air environment in more harsh areas.

## Low Cost & High Efficiency

PowerBox is also a junction box that can be convenient and fast wiring. This focus on ergonomic design can lead to improved efficiency during installation, ultimately saving time and costs.

## ① Excellent Heat Dissipation

Lamp radiator adopts high thermal conductivity pure aluminum material 1060, thermal conductivity effect is better, lamps and lanterns life longer.  
The lamps are designed with photoelectric separation program, better heat dissipation performance of the lamps, longer lamp life.

## ② Surface Treatment

Corrosion-resistant surface treatment is applicable to the air environment in more harsh areas.

## ③ Visor for Precise Light Control

- Directs more light onto the field.
- Dramatically reduces glare and spill.
- Enhance on-field playability.
- Installing and replacing the hood is safe and labor-saving, and the structure of the card slot is designed.

- 3 Length visor options with grill hood for precise light control.

## Built-in RGB Modes

Versatile options and vibrant colors: Built-in RGB dimming modes and an excellent spill control system save installation costs by adjusting a variety of lighting scenes without the need for additional RGB fixtures.

### 1 Glare-Free

The inside of the visor utilizes ammonia-chloride orange peel patterned mirror aluminum, achieving a reflectivity of 95%. Clearly defined cutoff lines suppress stray light, preventing light pollution.

### 2 PC Lens + Glass

Superior Light Efficiency, Long Lifespan. Utilizes a dual design of PC Lens + Glass, with glass effectively blocking UV rays, minimizing light loss, improving performance stability, and extending the lifespan of the luminaire.

### 3 User-friendly design for easy installation and maintenance

Integrated handle and heat sink design for easy transport and high-altitude installation. Doubles as support for bracket fixation, enhancing maintenance accessibility and operational efficiency.

## For TV Broadcasting

A revolutionary floodlight system for sports and area lighting with unrivaled performance, efficiency and light quality. The high-performance floodlight Apollo sets records in terms of performance with up to 288KLM. With a TLCI value of 90 and CRI 90, realistic colour rendering is guaranteed for broadcasters this means minimal post-processing effort.

1260W/ 1560W/ 1650W/ 1800W

Safety wire

Metal bellows prevent birds from pecking at the cables.

Aluminum alloy+SUS304, pass 1000 hours salt spray test.

## Precision Aiming

A precision aiming device will assist in precisely aligning the light to the aiming point.

## PC Lens

One-piece optic lens, various beam angles to meet the requirements of different courts.

Visor special design for light cutoff, no light pollution.

Without Visor

With Visor

## Good Heat Management

AL1070 pure aluminum, excellent heat dissipation performance, fully made of aluminum and weighs only 18.5kgs.

## Best Light Control

One-piece optic lens, with a precise optical design and various beam angles to minimize glare and meet the requirements of different courts. The visor is optional according to the size of the venue to cut off light distribution, obtain the best visibility, and provide comfortable light to the venue, athletes, live audience, and screen audience. And the louver makes the light more even.

Louver Optional

Visor Optional

## Make the Light Perfect

Apollo's LED optics are recessed in a low glare shield providing the perfect combination of optical accuracy and cut-off. Our Spill light control design outperforms typical LED systems in efficiency, brightness, suppressed glare, spillage, and sky glow. So you'll need far fewer fixtures to increase light on your field.

Common sports light systems provide excellent initial light levels and uniformity, but are difficult to contain illumination to the field. This presents challenges in reducing the spill light surrounding the field.

## DMX and DMX-RDM Optional

The DMX drivers enable luminaires to be connected to intelligent lighting management systems, for remote lighting management and dynamic light shows and meet the highest performance standards to link the luminaires and dynamic lighting control systems. The DMX-RDM programmable driver can be programmed for lighting behavior to support the integration of a variety of entertainment lighting devices.

Brightness, intelligent control  
one hand control

# NEO (FL09)

High-efficiency stadium light whose opto-electrical separation solutions help to reduce maintenance costs.

**IP66**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

In view of the problems existing in the current market, Huadian engineers launched this cost-effective and influential flood lights for stadiums. Neo has a narrow border and a large luminous surface for efficient material usage. It's lightweight, making it easy to install and resulting in low maintenance costs. It features a die-casting aluminum heat sink for effective heat dissipation and compact size to reduce wind resistance. The support structure is also made of die-casting aluminum, ensuring strong wind resistance. Neo offers different optical angles to meet various lighting needs. Alternatively, the driver can be installed in the in-distribution box of the pole, simplifying maintenance and reducing labor costs.

600W/ 800W/ 1000W/ 1200W

1500W

## Small Size & Small Wind Resistance

Neo LED flood lights' heat sink utilizes a die-casting process with high thermal conductivity AL material, ensuring rapid heat dissipation. This design effectively manages heat while minimizing the sink's volume, reducing wind resistance.

## Variety of Drivers Are Available

Neo provides a diverse range of IP66/ IP67 waterproof drivers to cater to different requirements.

## Opto-Electrical Separation to Reduce Costs

Neo provides a versatile lighting solution with optoelectrical separation. The driver can be conveniently installed together with the light body or separately in a suitable position, accommodating various installation environments and expanding its application range. This flexibility allows for easy replacement of traditional HID lamps on a 1:1 basis or simultaneous installation of multiple lights on a single pole. Furthermore, for maintenance convenience, the driver can also be installed in the distribution box. During shipping, the drivers and light bodies can be packed separately, reducing packing volume, optimizing container space, and leading to cost savings on customs duties and transportation.

## 1500W Weighing Only 23kg

NEO is a flood light with a compact, lightweight design, a 1500W variant weighing just 23kg (excluding the driver). This makes it ideal for high-altitude installation and maintenance, reducing operational difficulties and risks. Additionally, NEO's design helps minimize maintenance costs.

## IP66 Junction Box, Easy External Wiring

Neo offers an IP66 junction box that facilitates easy external wiring, and also against water ingress. With its user-friendly design, the junction box simplifies the process of connecting external wiring, enhancing installation efficiency, and improving the safety and stability of the lights.

## Step-Less Adjustable

Neo features a step-less adjustable bracket that allows for flexible positioning of the lamp body at any desired angle. This design provides versatility in lighting installations and ensures optimal light distribution in a wide range of settings. Neo's adjustable bracket enables precise positioning to meet specific lighting requirements.

## Die-Cast Aluminum Bracket

Neo's brackets feature die-cast aluminum technology and material, guaranteeing strong structural integrity and wind resistance. This enhances the lamp's stability, making it suitable for all weather conditions. The u-bracket design includes reserved space for installation, simplifying practical operations and providing added convenience for workers.

## Large Light-Emitting Area, Maximum Material Utilization

The narrow border design ensures a large light-emitting area, maximizing material utilization and space efficiency, and also contributes to cost savings. Neo's designed with a screw-free luminescent surface, ensuring a seamless and visually pleasing appearance.

- ◆ Precision aiming device will assist in precisely aligning the light to the aiming point.
- ◆ Visor To Trim The Excess Upward Light.

# FL06

FL06 is an independent module type high-power stadium flood light, a small module size and large gap reduces wind resistance and improves stability.

IP66  
Wet Location

IK10  
Rating

5 YEAR  
WARRANTY

CE CB EN SAA RoHS

FL06 Independent Module Stadium & Flood Light. Each module can adjust the horizontal and vertical angle separately, covering all parts of the field flexibly, the field illumination is more even, the athlete's vision is clearer, and the spectator's experience is also better. One module failure can not affect other modules, effectively reducing the cost of maintenance. FL06 adopts a no-flicker lightning supply, the color temperature has CRI >90 & TLCI >90 optional, with intelligent control such as DMX, Dali, etc. FL06 is especially suitable for professional competition venues and comprehensive stadiums that need live broadcasts.

(Optional lameshade)

## Designed For Professional Stadiums

FL06 is especially suitable for professional competition venues and comprehensive stadiums that need live broadcasts. Such as football stadiums, baseball stadiums, basketball arenas, tennis courts, multi-purpose stadiums, etc. FL06 floodlight stadium lighting solutions are an excellent choice for professional competition venues and comprehensive stadiums that prioritize high-quality lighting for live broadcasts and optimal viewing experiences. Its versatility makes it compatible with a wide range of sports and events.

## Chrome-plated anti-glare reflector

FL06 floodlight stadium light does incorporate an anti-glare cover and professional PC lens, which contribute to reducing glare and providing uniform illumination.

## Excellent Heat Management

The driver box is independently away from the heatsink so that the life of the driver is not affected by the heat.

## REMOTE CONTROL

Available for DALI and DMX512 control

# FL04-L

The FL04-L LED floodlight series sets the trend for modern stadium lighting applications.

CB CE  RoHS

**IP66**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

The series utilizes a lens + glass optical structure for precise positioning and uniform light distribution for professional competition venues and numerous harsh environments. A single module provides 800W of power. Dual modules can provide up to 1600W, weighing only 24kg, the structure of the luminaires using opto-electronic separation design, can easily realize the DMX control, power selected by dip switch, zhaga, light control, SYNAPSE wireless module control and other functions, at the same time, installation and maintenance are more economical, superior heat dissipation performance ensures that the luminaires of the 5-year warranty.

600W/ 700W/ 800W

1400W/ 1500W/ 1600W

## Lightweight & Cost Saving

The FL04-L flood sports light is a high-power module designed for stadiums. With high-power LED chips, a single module can provide up to 800W of power. The FL04-L stadium light features a lightweight design, 1600W just 24kg (without the driver box), making it lighter than other stadium lights with similar power output on the market.

800W/ 700W/ 600W

1600W/ 1500W/ 1400W

## Customizable high-power lighting solutions

The FL04-L luminaire ensures excellent heat dissipation, higher strength corrosion resistance, and single-mode power up to 900W. It can be customized to meet the needs of lighting site-specific solutions.

## Lens & Glass Double Protection

The FL04-L features a dual protection system with a lens and glass on its luminous surface. The lens ensures more precise light distribution, while the glass protects the lens against environmental factors, reducing light attenuation and extending the light source's lifespan. Additionally, the glass surface prevents dust and debris buildup, making it ideal for harsh environments like sandy or windy areas.

## Super Heat Management

The heat sink is made of metal material with fast heat conduction, the temperature rise test is 50°C [The reference value of temperature rise is 65°C], and the heat dissipation management is very good.

## Multi-Angle Optical Lens Options

The lens has a variety of angles to choose from: symmetrical angle of 10°, 20°, 30°, 40°, 60°, 90°, 120°, asymmetrical angle of: NB, MB, WB, SNB and other angles to meet the needs of different lighting places on lighting.

## Opto-electric Separation Solution

The FL04-L features a opto-electric separation design that keeps the driver separated from the heat generated by the sink, minimizing the impact of heat on its performance. Furthermore, the driver box mounting bracket allows for flexible installation in any suitable location. Additionally, the driver can be easily installed in a distribution cabinet, simplifying maintenance and reducing labor costs.

## Driver Optional

## Example System Topology (Wired DMX Controls)

Example system topology showing the FL04-L System in a typical used wired DMX Control Installation. Refer to the specifications and limitations of your wired DMX control device before installing this configuration.

## Example System Topology (Remote Access Point with Wired DMX Controls)

Example system topology showing the FL04-L System in a commonly used remote access point with wired DMX Control Installation. Refer to the specifications and limitations of your wired DMX control device before installing this configuration. Note: Laptop and mobile device are not included. A cellular network connection requires a cellular carrier network plan.

### VPN GATEWAY TO DMX SYSTEM CONTROLS

## Two Wiring Solutions Available

- 1 Opto-electric separation design to reduce material costs.

- 2 Electrical Components Enclosure

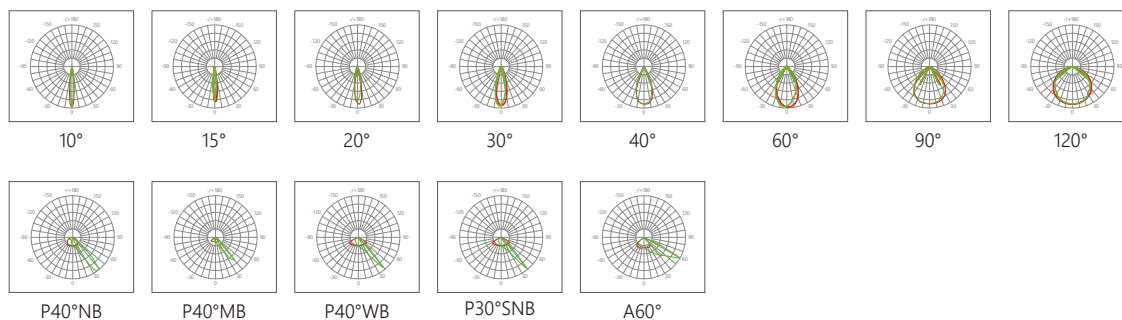

All the driver and electrical components are concentrated in the distribution box, convenient for maintenance, saving maintenance costs, provided higher security.

# FL04-S

The FL04-S LED floodlight series sets the trend for modern stadium lighting applications.

**IP66**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

The series utilizes a Lens + glass optical structure for precise positioning and uniform light distribution, making it suitable for professional competition venues and numerous harsh environments. Thanks to its high-power LED chips, it can deliver up to 500W of power with a single module and achieves a maximum luminous efficacy of 170 lm/W. The luminaire features an optoelectronic separation design, enabling easy implementation of DMX control, DIP switch power and beam angle adjustment, SYNAPSE wireless module control, and other functions. Additionally, its installation and maintenance are more cost-effective, and its superior heat dissipation performance ensures a 5-year warranty for the luminaire.

300W/ 400W/ 500W

## Optic & Wattage Adjustable Flood Lighting Solutions

The FL04-S features 3-in-1 power adjustment and 3-in-1 & 4-in-1 angle adjustment. Easy adjustment through the dip switch, not only applies to more venue lighting, but also reduces transportation costs and inventory for distributors.

### 3-in-1 Wattage Adjustable

500W: 300W-400W-500W

### 3-in-1 & 4-in-1 Optic Adjustable

20° -30° -40°

30° -45° -60° -80°

### Wire connectors

Anti-bend wire kink-resistant connector, protects wires from twisting.

## Customizable high-power lighting solutions

The FL04-S luminaire ensures excellent heat dissipation, higher strength corrosion resistance, and single-mode power up to 500W. It can be customized to meet the needs of lighting site-specific solutions.

## Lightweight & Cost Saving

The FL04-S flood sports light is a high-power module designed for stadiums. Thanks to its high-power LED chips, it can provide up to 500W of power with a single module and has a maximum luminous efficacy of 170 lm/W. The FL04-S is lightweight in design, making it lighter than other stadium lights with similar power on the market. This lightweight design not only simplifies installation and maintenance but also ensures high performance.

## Lens & Glass Double Protection

The luminous surface of the FL04-S contains a dual protection system of lens and glass. The lens ensures better control of light distribution, while the glass protects the lens from environmental factors, reducing light attenuation and increasing the life of the light source. In addition, the glass surface prevents the accumulation of dust and debris, making it particularly suitable for harsh environments such as sand and wind.

### Handle

Handle for easy transportation, easy to adjust the angle when installing, and improve work efficiency and safety.

### Visor

Visor help to introduce precise light control to the court, dramatically reducing glare and spillage and enhancing the on-court experience.

Built-in Power Supply

External Power Supply

CB

CE

RoHS

HD Lighting's engineer has designed an adjustable angle of 0-35° visor for FL03, which has precise control of the areas of light distribution, allowing it to precisely illuminate the specified area. By finely tuning the visor's angle and position, the lighting can be directed with pinpoint accuracy to highlight specific areas or objects while minimizing light spillage in undesired areas. Also, the visor incorporates an internal prism reflection structure, making uniform illumination, low glare, and optimal utilization of light.

## FL03 Combine Modular

1600W/2000W/2400W

300W/400W/  
500W/630W

800W/1000W/1260W

## Humanized Handle Design, Kindly for High-altitude Operations

To enhance the simplicity and convenience of installing the FL03 stadium light, we have implemented a thoughtful design feature—two non-slip handles positioned at the rear of the product. These handles cater specifically to workers installing the product at elevated heights. Typically ranging between 8 to 40 meters. By incorporating these handles, we not only prioritize worker safety but also streamline installation processes, saving valuable time and reducing labor costs while mitigating associated risks.

## Reliability and Safety Test

FL03 is a high-power modular product developed by our engineers. To ensure its reliability, we did various tests including a salt spray test, waterproof test, Integrate sphere test, 10 kV surge protection test, constant temperature and humidity test, thermal shock test, FL03 vibration test, and so on. Packaging vibration tests have been done to ensure its high packing standard, and safety during transportation.

## Small Size and Light Weight Helps to Ensure Small Wind Resistance

The compact and lightweight design of FL03 lighting solutions makes it suitable for high-altitude operations and maintenance. Additionally, the smaller size helps to reduce wind resistance, ensuring the long-term stability of the structures even in severe weather conditions such as gales.

## Utilize An Internal Prism Reflection Design to Optimize Light Distribution

The visor incorporates an internal prism reflection structure, making uniform illumination, low glare, and optimal utilization of light.

## Driver Built-in/ External

Driver can be fixed behind the heat sink, and also be flexibly installed in a centralized power box located on the pole. This can reduce frequent maintenance tasks at elevated heights, minimizing potential safety hazards for workers. When utilizing an external driver, the driver unit and the light body are designed to be independently waterproof rating of up to IP68. Furthermore, when the driver and light body are installed in conjunction, the entire light guarantees a waterproof rating of IP66. This ensures superior protection against water ingress and enhances the overall durability and reliability of the lighting system as a whole.

## Easy External Wiring

Design an external junction box that incorporates a reserved wiring position along with a waterproof male-female joint. This can simplify the installation process and save precious time. Also, the wiring box ensures convenient operation and provides a secure and waterproof connection, ensuring the durability and reliability of the lighting system.

**1** Driver External  
Electrical  
Components  
Enclosure

### **2** Junction Box

When the driver is built-in, it will come with a junction box.

## Adjustable Visor Help to Precision in Lighting Areas, Ensuring an Absolute Absence of Light Pollution

The visor can minimize the presence of unwanted spill light, and reduce the effects of residential areas. Adjustable visors have precise control of the areas of light distribution, allowing them to precisely illuminate the specified area. By finely tuning the visor's angle and position, the lighting can be directed with pinpoint accuracy to highlight specific areas or objects while minimizing light spillage in undesired areas. This level of control ensures that the illuminated space receives the ideal amount and direction of light, resulting in enhanced visibility, accentuated architectural features, and a tailored lighting experience for different applications and venues.

Indeed, when stadium light is operated without a visor, a portion of the luminous flux can be emitted as upward light and stray light, leading to some degree of light pollution. This upward light dispersion can have adverse effects on the surrounding residential areas and the overall lighting efficiency.

**Other Sports Light**  
*Without Visor*

FL03 Stadium Light incorporates a visor that significantly mitigates light pollution. With the visor installed, the amount of stray light and upward light is reduced to a mere 2%, ensuring minimal impact on neighboring residential areas. This reduction in stray light helps to control light pollution and provides a more focused and efficient illumination.

**FL03 Sports Light**  
*With Visor*

What's more, the adjustable angle feature of the visor allows for precise control of the light distribution. By adjusting the visor's angle, the FL03 Stadium Light can achieve a precise cut-off effect, precisely directing light to the designated area without unnecessary spills or glare. This level of precision ensures optimal lighting conditions for the intended area and minimizes any potential disturbances or disruptions in the surroundings.

**FL03 Sports Light**  
*With Adjustable Angle Visor*

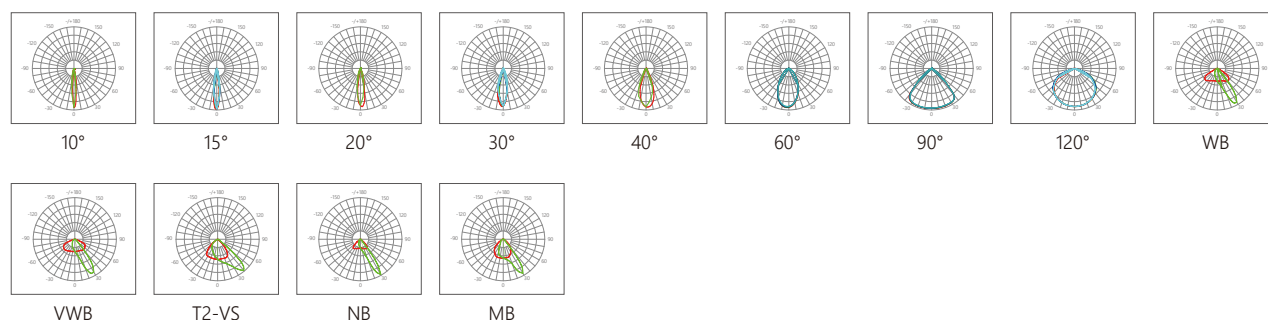

In summary, the inclusion of the visor with angle adjustment capabilities in the FL03 Stadium Light greatly improves its performance by reducing stray light and upward light, effectively mitigating light pollution concerns. This allows for accurate and efficient illumination, specifically targeted to the desired areas without impacting the neighboring residential zone.

# LED FLOOD LIGHT

CE RoHS

## FL29

Economic floodlights in small size for a wide range of applications.

**IP66**  
Wet Location

**IK08**  
Rating

**5YEAR**  
WARRANTY

The FL29 LED Floodlight is available from 50W to 600W, an ideal economic choice for sports field, stadium, arena lighting, etc. It is small and easy to install, less inventory taking and suitable for both industrial lighting and even architectural lighting.

600W / 500W / 400W / 300W / 200W / 150W / 100W / 50W

## Cutting-edge Unibody Design

The FL29 floodlight is available in 8 options from 50 to 600 watts to support a wide range of indoor and outdoor sporting event lighting applications. Die-cast structure one-piece molding design, stylish appearance, fast heat dissipation, applicable to a variety of harsh environments, ensure 5-year warranty.

### 1 Glass + Lens

FL29 floodlight features a glass and lens combination for double protection, with anti-impact IK08 rating and high weather resistance. The glass shields the PC lens from UV rays, ensuring long-lasting high brightness illumination.

### 2 Flexible Light Adjustment

FL29 floodlight is with flexible angle adjustment  $\pm 90$  degrees. This allows for easy adjustment of the direction and coverage range of the lamp according to specific application requirements.

### 3 Stability U-bracket

U-bracket is offers exceptional strength to withstand outdoor wind pressure, ensuring stability and reliability

### 4 Respiratory Valve

Effective protection against temperature and air pressure balance inside and outside the luminaire.

**RoHS**

FL23 is a cost-effective, light weight, ultra-thin flood light that is at least 10% cheaper than similar options. It is commonly used in outdoor sports venues, swimming pools, industrial sites, logistics parks, car parks, outdoor billboards, road intersections, and architectural lighting.

200W/ 300W/ 400W/ 500W/ 600W/ 700W/ 800W

## 3-in-1 CCT and Wattage Selectable Solutions Optional

FL23 with 3-in-1 CCT and Wattage Selectable solution, allowing for flexible application in various locations.

*This versatility facilitates better stock distribution for customers, reducing the risk of inventory backlog.*

### ONLY FOR Non-isolated Driver:

3-in-1 CCT Selectable » » 3000K-4000K-5000K  
4000K-5000K-5700K

### Isolated and Non-isolated Driver are All Available:

3-in-1 Watt Selectable » » **400:** 200W-300W-400W  
**600:** 400W-500W-600W  
**800:** 600W-700W-800W

## Up to 175Lm/W, Lens Customizable

Our flood light features high-efficiency LEDs (5050 or 2835) with excellent light output, low power consumption, and high temperature resistance. The maximum light efficiency reaches 175Lm/W, with options of 165Lm/W, making it a cost-effective choice. The 8-in-1 or 6-in-1 modular lens reduces the mold cost significantly. Customization is also available for lens types beyond the 25°, 60°, 90°, and asymmetric options.

## Good Heat Management

- The FL23 utilizes high thermal conductivity die-casting AL material, ensuring excellent thermal conductivity.
- The separate installation of the driver and LEDs prevents heat effects on the driver.
- The convective hole facilitates rapid heat dispersion, enhancing the overall heat dissipation and maintaining performance stability.

## IP66 Dual Waterproof Reduce 10% Probability of Water Leakage

The driver cavity and LEDs cavity of FL23 are designed separately, allowing for independent waterproofing. This design reduces the leakage rate by 10% compared to integrated designs, improving stability and performance of the light.

## Dual Breath Value Design

FL23 is equipped with metal breath valves in both the driver and LEDs cavities. These valves maintain a balanced airflow inside and outside the cavities, effectively preventing moisture mist from affecting the electrical components and reducing light attenuation caused by water mist on the luminous surface.

The metal sheet can be removable, without screws on the surface, and the appearance is complete.

### Glass + Lens

FL23 floodlight features a glass and lens combination for double protection, with anti-impact IK08 rating and high weather resistance. The glass shields the PC lens from UV rays, ensuring long-lasting high brightness illumination.

### Robust Bracket with 5-Degree Tick Marks

The u-bracket that offers good adjustments using a 5-degree tick marks knob, providing precise control over the direction of light. This flexibility, combined with its adaptable light types that include both symmetry and asymmetry, ensures accurate illumination in desired positions. This makes the FL23 an optimal choice for customers who prioritize high construction precision.

U-bracket is offers exceptional strength to withstand outdoor wind pressure, ensuring stability and reliability.

High light efficiency reaches up to 175Lm/W, with 165Lm/W optional.

The convective hole facilitates rapid heat dispersion, enhancing the overall heat dissipation and maintaining performance stability.

The connection interfaces is reserved, DALI, 0-10V dimming optional.

## Loop in/out Connection Available

We provide a dedicated port that facilitates easy loop in/out connection for multiple lights. This feature is particularly advantageous for lamp posts or areas that require multi-lighting, as it simplifies the wiring process and reduces wire costs. One flood light failure will not affect the operation of other lights, minimizing the impact of maintenance on site usage.

Input Voltage AC220-240V:						
Cable(mm <sup>2</sup> )	Loop in/out Connection Quantity (pcs)					
	200W	300W	400W	500W	600W	800W
1.0	6pcs	4pcs	3pcs	3pcs	2pcs	2pcs
1.5	9pcs	7pcs	5pcs	5pcs	3pcs	3pcs

## NEMA and Zhaga Interfaces Available

NEMA and Zhaga interfaces are reserved to select appropriate smart control according to different regions and habits, such as NEMA + Photocell, PIR Sensor, PIR Sensor + Remote Control, etc. .

## Both The Most Cost-Effective and The Longest Lifespan Options Are Available

**The lowest cost option:** Driver installed in the power cavity, open the back cover to replace the driver, high cost-effective.

## Robust Bracket with Tick Marks

The incremental 30-degree tick marks provide a reference system that allows for accurate aiming of the luminaires attached to the bracket. By adjusting the position of the hex head bolt along these tick marks, the angle and direction of the luminaires can be finely tuned to achieve the desired lighting arrangement. Overall, the incorporation of incremental 30-degree tick marks into the robust bracket enhances the aiming and alignment capabilities of the luminaires.

## Help You Keep Inventory Healthy

FL16 is a modular LED stadium light that individually ensures continuous functioning, when individual LED failure is caused by a short or open circuit, effectively reducing maintenance costs. Component mode transportation reduces packaging and shipping costs, which is great for customers who need to assemble and stock preparation. Integrated design of the driver and heat sink with concealed wiring ensuring safety and aesthetics. Such as Ports, airports, outdoor sports grounds, stadiums, ball fields, squares, parking lots, terminal buildings, and other large outdoor places.

## Ladder Module Help to Super Heat Dissipation

Ladder module design ensures excellent heat dissipation, resulting in stable and efficient longterm performance thanks to strong air convection.

## Most Cost-effective Way for Maintenance

Individual modular ensure continuous functioning with individual LED failure caused by a short or open circuit, effectively reducing maintenance costs.

## Reduced Shipping and Tariffs Costs

The import of accessories helps to reduce tariffs, component mode transportation reduces packaging and shipping costs, which is great for customers who need to assemble and stock preparation.

Infinitely adjustable bracket and can be installed upright and reversely in practical application.

# FL2.5

Modular flood & sports lights series which operates independently,  
Special lighting for stadiums, wharves, squares, and other large places.

**IP66**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

**CB CE**

**RoHS**

FL2.5 flood sports light is a versatile, modular system that ranges from 300W to 1200W, with a single mode option of 300W. It has a high light efficiency of 150 lumens per watt and durable components made of aluminum alloy. The lenses are made of PC material for high transmittance and are protected by toughened glass. The FL2.5 modules operate independently, reducing maintenance costs. The floodlights can be adjusted within a  $\pm 30^\circ$  angle and can be packaged in bulk for cost savings.

300W

600W

900W

1200W

## Reduced Shipping, Tariffs and Warehouse Costs

Component mode transportation reduces packaging, shipping, and warehouse space. This results in cost savings for freight, customs, and warehousing, particularly beneficial for distributors who require spare warehouses.

## High Transmittance Lens

FL2.5 floodlight features a PC lens material with high transmittance and high light efficiency. This ensures efficient light distribution and reduces light loss.

## Modular Design for Independent Operation

The FL2.5 floodlight is designed with modular units that can operate independently. If one module gets damaged, it doesn't affect the functioning of the other modules. This reduces maintenance costs and enhances the reliability of the overall lighting system.

## Lens Protection and Light Attenuation Reduction

FL2.5 floodlight is equipped with toughened glass cover. This protects the lens from damage while effectively minimizing light attenuation over time.

## Visor Optional

## Flexible Light Adjustment

Each module of the FL2.5 floodlight can adjust the angle  $\pm 30^\circ$  independently. This allows for easy adjustment of the direction and coverage range of the lamp according to specific application requirements.

Easy to replace modules

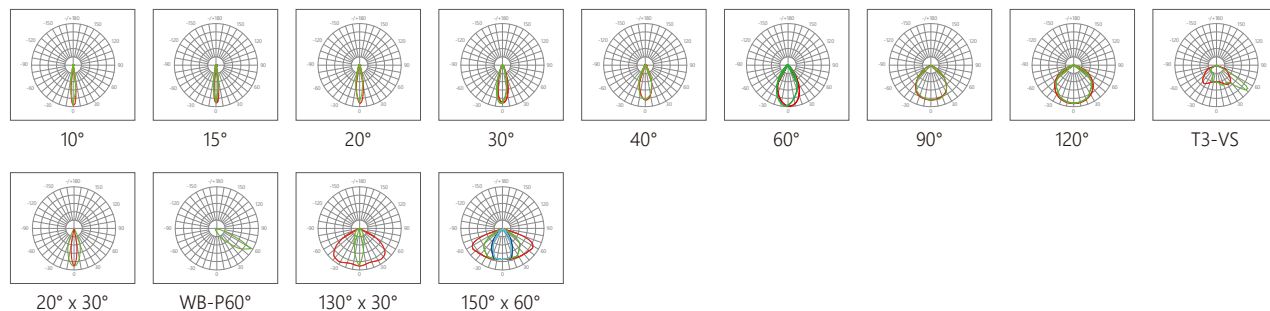

Revolving the arrow to the horizontal of the bracket, slidable gear. FL2.5 modular units that can operate independently.

Modular flood & sports lights series which operates independently, special lighting for outdoor stadiums, wharves, squares, and other large places.

**IP66**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

**UL**  
LISTED

**CB CE**

**RoHS ErP**

FL02 flood sports light is a versatile, modular system that ranges from 250W to 1250W, with a single mode option of 250W. It has a high light efficiency of 140 lumens per watt and durable components made of aluminum alloy. The FL02 modules operate independently, When one module doesn't work, other modules will not fail, reducing maintenance costs. A single module can be rotated making the lighting direction flexibly adjusted. The floodlights can be adjusted within a  $\pm 30^\circ$  angle and can be packaged in bulk for cost savings.

## Modular Design for Independent Operation

The FL02 floodlight is designed with modular units that can operate independently. If one module gets damaged, it doesn't affect the functioning of the other modules. This reduces maintenance costs and enhances the reliability of the overall lighting system.

## Reduced Shipping, Tariffs and Warehouse Costs

Component mode transportation reduces packaging, shipping, and warehouse space. This results in cost savings for freight, customs, and warehousing, particularly beneficial for distributors who require spare warehouses.

## High Transmittance Lens

FL02 floodlight features a PC lens material with high transmittance and high light efficiency. This ensures efficient light distribution and reduces light loss.

## Lens Protection and Light Attenuation Reduction

FL02 floodlight is equipped with toughened glass cover. This protects the lens from damage while effectively minimizing light attenuation over time.

Revolving the arrow to the horizontal of the bracket, slidable gear. FL02 modular units that can operate independently.

## Flexible Light Adjustment

Each module of the FL02 floodlight can adjust the angle  $\pm 30^\circ$  independently. This allows for easy adjustment of the direction and coverage range of the lamp according to specific application requirements.

## Robust Bracket with Tick Marks

Tick marks are provided in the casting of a single hex head bolt to allow for precise aiming and to facilitate the alignment of multiple luminaires.

## Quikly Replace the Modular

Screw off the wing nuts and revolve it to 90°.

Fetch out the defective lights.

Put the lights to the clip, screw down the wing nuts to 90°angle. Insert the waterproof connector to the socket, light up the light.

## Stability and Protection

Temperature simulation,  
Driver temperature rise 32°, Chip temperature rise 60°.

IP66  
Water-proof

## Multiple Installation Available

# LED AREA LIGHT

# SB05A 27 Fixtures in 1

LED area light with smart dimming and CCT-adjusting capabilities. It features 3-in-1 power, 3-in-1 color temperature adjusting and 3-in-1 adjustable angle functions. Power ranging from 60W to 400W, the SB05A is suitable for various outdoor lighting applications including parking lots, residential areas, streets, sidewalks, sports fields, campuses, parks, and industrial and commercial areas.

**IP66**  
Wet Location

**IK09**  
Rating

**5 YEAR**  
WARRANTY

**CE CB RoHS**

The SB05A LED area light series consists of three models (S, M, and L) ranging in wattage from 60W to 400W, which features 3-in-1 wattage, 3-in-1 color temperature and 3-in-1 adjustable beam angle. The intelligent adjustment function greatly saves inventory space and transportation cost. These lights are suitable for outdoor parking lots, residential areas, streets, sidewalks, outdoor sports fields, campuses, parks and industrial/commercial areas.

## Wattage and CCT Adjustable Area Lighting Solutions

### 1 3-in-1 Wattage Selectable

<b>S</b>	100W: 60W-80W-100W
<b>M</b>	150W: 80W-120W-150W 200W: 120W-150W-200W
<b>L</b>	240W: 150W-200W-240W 300W: 200W-240W-300W 400W: 240W-300W-400W

### 2 3-in-1 CCT Selectable

Standards: 3000K-4000K-5000K  
Optional: 4000K-5000K-5700K

### 3 Adjustable Angle T3, T4 and T5

## PIR & Microwave Sensor Optional

Microwave and PIR sensor interfaces are reserved on the cover of the power box, which facilitates the extension of the functions required by customers.

## Stability Driver & More Solution Optional

The heat sink design in the power box of the SB05A LED area light series is specifically engineered to ensure the stability of the driver. This design allows for quick and efficient spreading of heat, aiding in heat dissipation. It is compatible with driver brands such as LiFud, Sosen, and DONE, ensuring consistent cooling capacity regardless of the chosen power supply. This provides customers with a range of power options. Additionally, the SB05A LED area light utilizes a no-flicker lightning source, ensuring a comfortable and consistent illumination effect throughout the entire light.

## Multiple Installation Brackets Available

SF Bracket

EA Bracket

YK Bracket

4-in-1 Multiple Bracket

TR Bracket

## Humanized Design to Save Maintenance Cost

The power box cover is connected to the lamp body with a rotating-link structure. By loosening two screws, the power box can be easily opened without the cover falling off. This convenient design allows for easier manual maintenance operations, improves safety during maintenance and operation, and helps reduce maintenance costs.

## Vents Help Cool the Heat Sink & Prevent Water Accumulation

The heat sink in the SB05A LED area light series is made using the ADC12 die-casting aluminum process, which conducts heat quickly. The design of the heat sink includes vents and encourages air convection, which aids in cooling the heat sink effectively. Additionally, this design feature helps prevent water accumulation, making it suitable for areas with high rainfall.

## Light Control Solution Optional

### 1 Cost-Effective Light Controlled Accessories

# SB06

SB06 is a smart design LED area light that can replace the lenses with tool-free, for the convenience of distributors to storage.

**IP66**

Wet Location

**IK08**

Rating

**5YEAR**

WARRANTY

**CE CB RoHS**

## Help Your Inventory Keep Fit

By being able to easily swap out lenses, distributors can adjust the lighting options based on customer demands without having to stock multiple variations of the entire light fixture. This flexibility can help streamline inventory management and reduce costs associated with excess inventory.

100W/ 150W/ 200W/ 240W/ 300W/ 400W/ 500W

## Effective Heat Dissipation Management

The heat sink is designed with water outlet holes, enabling the generation of a chimney effect for improved heat dissipation performance. Additionally, the heat sink remains free of water and dust accumulation, ensuring its longevity. With a large illuminated surface, the heat from the light beads is evenly dispersed, resulting in excellent heat dissipation.

## High Power Stability

The power supply is installed with a grid-like heat sink design, enabling effective conduction of heat away from the driver. This ensures the longevity and stability of the power supply.

## Multiple Configurations Available

- Optional NEMA or MINI photocell to meet different customer price and usage requirements.
- Multiple surge protectors option

## Conducive to Stocking and Reducing Inventory Risks

By being able to easily swap out lenses, distributors can adjust the lighting options based on customer demands without having to stock multiple variations of the entire light fixture. This flexibility can help streamline inventory management and reduce costs associated with excess inventory.

## ADC12 and Anti-corrosion Surface Treatment

The luminaire body is made of ADC12 die-cast aluminum, with an outdoor powder-coating surface treatment. Undergone a 500-hour salt spray test, demonstrating excellent corrosion resistance.

## High Light Transmittance Lens

Use a high-transparency lens (Brand TEIJIN 1250Z), with a high light transmittance of up to 90%. Its excellent heat resistance, UV resistance, and impact resistance, allow for prolonged reduction of light loss.

## Wattage and CCT Selectable Area Light

SB06 features a 4-in-1 power adjusting and 3-in-1 CCT adjusting. It utilizes the M32 oversized switch space for convenient customer operation.

### ■ 4-in-1 Wattage Selectable

**S** 100W: 50W-65W-80W-100W  
150W: 80W-100W-120W-150W

Standards: 3000K-4000K-5000K  
Optional: 4000K-5000K-5700K

## Save Maintenance Costs

Just like the lens opening mechanism, the driver box can also be opened without tools. This is very convenient for the later maintenance of the power supply, saving time and costs for maintenance.

**Tool-free quick replacement of lenses:** The lens cover uses snap-locking for easy removal and replacement, without needing any tools, which is conducive to stocking and is one of the best choices for distributors and agents.

**Screwless lens fixation:** There are no screws between the lens and the heat sink, enabling the fast replacement of the lens and enhancing maintenance efficiency.

**Versatility of lenses:** The lens can be installed by rotating 90 degrees to the left or right according to specific lighting requirements, making it suitable for special lighting scenarios.

**Stable light distribution effect:** By securing the lens with a strong magnet, it compensates for displacement caused by thermal expansion, ensuring a stable light distribution effect.

**Dual breather valves:** Maintain airflow balance inside the lens chamber, preventing fogging, and improving the stability and reliability of the product.

## Light Control Solution Optional

### 1 Cost-Effective Light Controlled Accessories

### 2 Multi-function Light Controlled Accessories

## Multiple Installation Brackets Available

SF, EA, TR, YK, and 4-in-1 multiple brackets are available to meet different installation environments.

## HB19

Angle Adjustable UFO High Bay

**IP65**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

The HB19 Angle Adjustable High Bay sets a new standard in industrial lighting by offering wattage/ CCT options from 60W to 240W, combined with a fully adjustable 3-in-1 optical lens that allows precise customization of the beam angle to 60°, 90°, or 110°. This flexibility provides optimal illumination across a wide range of applications, from warehouses and industrial facilities to large retail environments, making it an adaptable solution for various lighting needs.

100W/ 150W

200W

240W

## 27 fixtures in 1

Three additional switch on the housing allows for easy adjustment of the beam angle between 60°, 90° and 110°, power adjustable and CCT selectable. This innovative design not only simplifies installation, but also minimizes the need for multiple high bay models, significantly reduces storage space, reduces SKUs, simplifies logistics, and ultimately provides a more efficient and cost-effective solution, resulting in a significant reduction in operating costs.

### Adjustable Angle 60°, 90° and 110°

## Efficient Heat Dissipation

The heat sink consists of die-cast aluminum profiles that ensure fast heat conduction and excellent heat dissipation. The rapid heat transfer effectively increases the lifespan of the luminaire.

## Installation Optional

U-Bracket Mounting

Hook Mounting

## UGR<28

The HB19 provides exceptional lighting comfort, with a UGR<28, this means it produces minimal glare, making it comfortable for workers and reducing the risk of eye strain or discomfort. Additionally, it meets the DLC Premium standards.

## Most Budget-friendly Highbay

As one of the most budget-friendly solutions on the market, the HB19 is equipped with high-performance Lumileds 2835 LEDs and a reliable Moso driver, delivering superior efficiency with up to 160 lm/W.

## Sensor Optional

HB19 includes a sensor base that makes it easy to install microwave sensors, which can be configured to adjust brightness and hold time, saving additional energy and costs. A remote is also available for an additional level of control.

## Accessories Optional

Aluminium reflector

PC reflector

Dust-proof cap

±90° adjustable bracket,  
Fixed on driver

Remote controller

Sling chain

Hook

Safety rope

Microwave motion sensor

## Hurricane (HB14)

Hurricane is a most cost-effective highbay light who using 0-10V dimming driver and Lumileds 2835 LEDs likely contributes to its energy-efficient operation and longevity, and make it a most cost-effective high bay.

**IP65**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

Hurricane sounds like an impressive highbay light! Its power-adjustable options make it a versatile lighting solution that can be customized to fit different settings. With its range of 60-240W, businesses and facilities can choose the appropriate power level for their specific needs. With CCT selectable functions, the user can adjust the color temperature of the light output to suit the preferences or specific lighting needs.

120W	150W	200W
150W	200W	240W

CW	NW	WW
5700K	5000K	4000K

## UGR<28 (60°)

UGR<28 at 60-degree, this indicates that it produces minimal glare and is comfortable for workers to operate around, reducing the risk of eye strain or discomfort.

## Maximum Material Utilization, Good Heat Management

A flat heat sink provides a larger heat dissipation surface area and faster heat conduction, improving the overall heat dissipation effect, and leading to a longer lifespan and greater reliability. Furthermore, the circular heat sink and large light-emitting surface ensure a high rate of light utilization, uniform light, and a low glare value.

## Higher Light Efficiency Up to 160lm/W

With the high permeability lens, light efficiency can be up to 160 Lm/W, it can provide strong illumination while using less energy compared to other high bay lights.

## Optional Built-in Smart Control Modules

## Driver is Longevity and Reliability

With a distance of 32mm, the driver is effectively insulated from the heat generated by the LED components. This ensures that the driver operates at a stable temperature, which can extend its lifespan and improve its reliability.

Economical and Practical Street Light Series

**IP65**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

SL13 is an economical and affordable street light series, with power ranging from 80W to 240W. It is particularly suitable for outdoor lighting applications such as rural roads, parks, squares, and industrial parks.

### Affordable and User-Friendly

Utilizing die-casting integrated molding technology and a one-piece front cover glass design, SL13 minimizes components, reducing mold and material costs while ensuring ease of use.

### PC+Glass

The light-emitting surface features a dual protection mode with PC lens and glass. The lens is made of PC material, achieving a luminous efficacy of 150Lm/W. The glass effectively blocks UV radiation, protecting the lens from damage, ensuring stable performance, preventing yellowing and brittleness, and minimizing light loss.

### Smooth Heat Surface

The surface of the SL13 heat sink is smooth, preventing dust, water, or snow accumulation. This feature makes it suitable for areas with high winds, heavy rainfall, or snowfall, minimizing environmental impacts on the luminaire's performance.

### Mounting Options

The bracket allows for adjustable angles of  $\pm 15^\circ$ , accommodating both horizontal and vertical mounting configurations.

#### NEMA + Photocell

High-Cost Effective LED Street Light Series!

**IP65**  
Wet Location

**IK08**  
Rating

**5YEAR**  
WARRANTY

SL12 is an energy-efficient street light series, featuring a sleek and minimalist design. With power options ranging from 40W to 200W, it offers II, III, IV, and VI lighting distributions, catering to single-lane, double-lane, triple-lane, and quadruple-lane roadways. Suitable for various applications including rural roads, urban streets, highways, etc.

150W/ 200W

100W/ 120W

40W/ 60W/ 80W

## Classic and Stylish Design

SL12 has a sleek and minimalist appearance, with clean lines and balanced proportions, making it a classic and enduring street light series. Its design seamlessly integrates with modern urban architectural styles, adding a touch of sophistication to the cityscape.

## Smooth Heat Surface

The surface of the SL12 heat sink is smooth, preventing dust, water, or snow accumulation. This feature makes it suitable for areas with high winds, heavy rainfall, or snowfall, minimizing environmental impacts on the luminaire's performance.

## Mounting Options

Horizontal Mounting

Vertical Mounting

NEMA + Photocell

## Tool-Free Maintenance

The driver and wall cover are secured with snap - on fasteners, allowing the workers quickly to open it without tools. This enhances maintenance efficiency, saving time and costs.

### 1 Power Cut-off Switch

The driver unit features a built-in power cut-off switch: opening the cover cuts off power while closing it restores power. It not only ensures worker safety but also eliminates the hassle of wiring, enhancing maintenance efficiency, and reducing cost.

### 2 Rapid Driver Replacement

The driver base plate is compatible with various driver mounting holes, allowing customers to choose the driver that best suits their needs and quickly replace it as necessary.

## Storm (SL05)

30W-400W LED Street Light Series.

**IP66**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

Storm is a street light series with a lens modular design. It includes four different sizes and models, with a power range of 30W-400W. The modular lens design allows for flexible combinations with 3030 and 5050 LEDs, providing versatile lighting options. Storm street lights are suitable for a wide range of applications, including country roads, urban roads, highways, parks, industrial parks, plazas, docks, and outdoor parking lots.

## Smooth Surface

A smooth surface reduces dust accumulation, which is suitable for harsh environments with high wind, sand, and rain or snow. It uses a corrosion-resistant coating, making it suitable for long-term usage in coastal areas with high air corrosion or special circumstances.

## Tool-free for Maintenance

Storm street lights can be accessed without the need for any tools. It utilizes a convenient snap fastener, providing easy and tool-free access for maintenance or replacement of electronic components.

## Dual Waterproof Design

The light fixture uses a one-piece waterproof silicone rubber ring with an IP66 waterproof rating. A built-in breath valve helps maintain balanced air pressure inside and outside the light. Ensures that even in rainy or humid conditions, the light does not accumulate water or fog, ensuring high-quality illumination and minimizing light degradation.

## Smart Design

The heat sink and the cover are separable, which is more convenient for maintenance.

## Knife Switch

The knife switch cut the power off immediately when the power compartment opened, ensuring the safety of workers.

## Type II, Type III, Type IV Available

Different light angles, such as Type II and Type III, are available for two-lane or three-lane roads.

## Safety Rope

Safety rope is designed to securely fasten the street light to the installation pole, prevent the risk of accidental falls, provide an additional layer of protection, and ensure the reliability of the fixture.

## Modular Design

Modular lens allowing compatibility with both 3030 and 5050 led beads. This makes it not only simplifies maintenance but also allows for easy disassembly and installation. Additionally, it helps save on mold costs by eliminating the need for separate molds for each type of lens bead.

## Lens+Glass

With PC lens + glass, resulting in higher protective performance. The glass reduces the impact of sunlight on the PC lens material, preventing it from yellowing or becoming brittle. This design helps reduce light degradation and ensures a more stable performance of the entire light fixture.

The light fixture has  $\pm 20^\circ$  adjustability, allowing it to match different pole angles

# SL03

40W-200W LED street light series, whose smooth surface eliminates the risk of accumulation of dust and dirt in harsh environments.

**IP66**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

**CE CB ENEC RoHS**

SL03 is an LED street light series, with wattages of 40W-200W. Adopt a high-power LED patch (Lumileds) light source, the driver can match any brand. SL03 has designed three photometric diagrams, including T2, T3, and T4, which are suitable for most two-lane, three-lane, and four-lane urban roads, highways, and country lanes. SL03's heat dissipation design with a smooth surface eliminates the risk of accumulation of dust and dirt in harsh environments. Die-cast aluminum heat dissipation radiator, lightweight and faster heat dissipation, ensures the optimal performance of heat management.

40W/ 50W/ 60W

70W/ 75W/ 80W/ 90W/ 100W

120W/ 130W/ 140W/ 150W

180W/ 190W/ 200W

- The whole lamp of the product reaches an IP66 waterproof rating.
- More installation methods are optional.
- The heat sink and lamp body are integrated, lightweight, and have faster heat dissipation.
- Light lifespan is up to 50,000 hours.
- Have a patent for appearance and utility model.
- Warranty for five years.

## Installation Optional

Vertical

Straight arm mounting

## Good Heat Dissipation

The heat sink is integrated with the lamp housing, and the LED is directly connected to the outer casing. The heat dissipation fins and the air convectively dissipate heat through the outer casing, which fully guarantees the service life of the LED street lamp for 50,000 hours.

## Whole Lamp Spray Waterproof Test

The lamp housing is made of aluminum die-casting, which is designed to effectively dissipate heat, waterproof and dustproof. The surface of the luminaire is UV-resistant and anti-corrosive, and the overall luminaire meets the IP66 standard.

## 10KV Surge Protect

Built-in surge protector for safer use of electricity, protection against indirect and direct lightning or other transient overvoltage surges.

# LED HIGH MAST LIGHT

# HM01A

High Mast Roadway and Area Lighting

**IP66**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

**UL**  
LISTED

**CE RoHS**

HM01A is specially developed for new and reformed high masts, we can provide a whole lighting solution for the simplest and most complex illumination applications. Such as port container facilities, highways and interchanges, rail yards, correctional Facilities, large area industrial, military installations, airports, truck stops, toll plazas.

300W/ 450W/ 600W/ 750W/ 900W/ 1000W

## Modular Design

Combined with (2/ 4/ 6/ 7) LED modules, and equipped with a glass/ PC lens for each module, our High Mast Light can converge stray light most efficiently. Every single module is placed in a completely ventilated aluminum housing for maximum thermal transmission. The heat sink is made up of two pieces of die-casting aluminum for thermal convection, there are two screw bolts and buckles to fix the light when assembling and can be opened in 180 degrees.

## 1:1 Replacement 2000W HPS

Lumen packages ranging from 45,000 to 150,000 provide one-for-one replacement of up to 2000 watt HPS.

## Best Light Control

Prismatic glass optics provide high application efficiency, uniformity, and glare control.

## Reliability and Long Lifespan

Long system life with driver life exceeding 100,000 hours and LED life of L82 @100,000 hours minimize maintenance costs. Robust mechanical design with IP66 optics, 3G vibration rating, 4-bolt mounting, and a polyester paint finish with a 1,000-hour salt fog rating ensures system reliability.

## Roi-Oriented

Robust extreme surge protection rating of 20KA/ 10KA. Control options include 0-10V dimming, 7-Pin photocontrol, ROAMTM enabled Field-adjustable output allows for zone control, accelerating your return on investment.

ENERGY SAVINGS	
Energy Savings	60%
Maintenance Savings	60%
Service Life	>100,000Hours

Fit for round Pole within 42-60mm.

## For Roadway Lighting

The luminaire has multiple roadway lighting distributions designed to maximize spacing while meeting stringent requirements of IES RP8 guidelines for average, uniformity, and veiling luminance. Installation costs are minimized with this direct retrofit luminaire without rewiring or changing existing luminaire arms. Asymmetric distributions are easily aimed toward the roadway with the rotatable optical assembly. Asymmetric distributions are easily aimed toward the roadway with the rotatable optical assembly.

## Ventilation Convection Housing

The luminaire uses a die-casting heat sink to convect/ conduct heat, quickly dissipate heat, and extend the life of the LED lamp.

## SPECIFICATIONS

Model No.	HD-HM01A-300W/ 450W/ 600W/ 750W/ 900W/ 1000W
Wattage	300W/ 450W/ 600W/ 750W/ 900W/ 1000W
Light Efficiency	150Lm/W @5700K Ra70
Lumen Flux (@5700K)	45,000Lm/ 67,500Lm/ 90,000Lm/ 112,500Lm/ 135,000Lm/ 150,000Lm
Beam Angle	T2 / T3 / T4 / T5
CCT	3000K/ 4000K/ 5000K/ 5700K/ 6500K
CRI	70
SDCM	<5
Input Voltage	AC100-240V / AC100-277V / AC200-480V
Power Factor	0.90
THD	<20%
Surge Protection	10KV / 20KV Optional
Protection Against Electric	Class I
IP	IP66
IK	IK08
Operating Temp Range	-40°C~+50°C @Outdoor / -40°F~+122°F @Outdoor
Lifetime	100,000H (L70B50 @25°C) / (L70B50 @77°F)
Intelligent Control	0-10V Dimming, DALI
Warranty	5 Years
Certificate	UL / CUL / CE / ENEC / RoHS
LED Brand	Lumileds
Driver Brand	Inventronics, Moso
Structure	Die-casting / High Thermal Conductivity AL
Finish	Powder Coated
Lens	Polycarbonate/ Glass
Color	Gray

## Photometric Diagrams

## Parameters

**Watt:** 300W/ 450W/ 600W/ 750W/ 900W/ 1000W

**N. W (±0.5) :** 24.7kg (54.45 lbs)

# HM02

A new high mast light with wattage from 500w-960w and is suitable for outdoor squares, intersections, urban roundabouts, ports, railway stations, and integrated outdoor stadiums. HM02 lens is designed with all-crystals, which have high transmittance and lumen up to 153,600lm.

**IP66**  
Wet Location

**IK08**  
Rating

**5 YEAR**  
WARRANTY

**CE RoHS**

HM02 is designed with fully prismatic glass optics that produce an overlapping light pattern resulting in high application efficacy providing excellent uniformity and glare control resulting in excellent visibility within the space. This luminaire has an area-narrow and area-wide distribution to maximize pole spacing while meeting the required foot-candle level and uniformity for the application. The lamp body can be rotated from 0° to 350°, flexible and convenient to allow customers to adjust the required angle in the process of installation and use so that the lighting of the application scene is more uniform.

630W/ 960W

500W

## Excellent Uniformity and Glare Control

The fully prismatic lens optics produce an overlapping light pattern resulting in high efficacy and providing excellent uniformity and glare control resulting in excellent visibility within the space.

## Intelligent Control for More Cost-Saving

With an intelligent Photocontroller system, the HM02 intelligently controls the ON/OFF state of high mast lighting according to the intensity of sunlight, saving energy, and reducing carbon dioxide emissions.

## Convection Heat Dissipation Makes a Longer Lifespan

The convection heat dissipation design system dissipates the heat of the lights into the air, avoiding heat effects on the driver, in time to ensure the long-term stable operation of the lamp.

## Humanized Driver Cavity Design

Open-close power supply cavity design is convenient for maintenance.

## 0-350° Rotate

The lamp body can be rotated from 0 to 350°, which is flexible and convenient to allow customers to adjust the required angle during installation and use, so that the illumination of the application scene is more uniform.

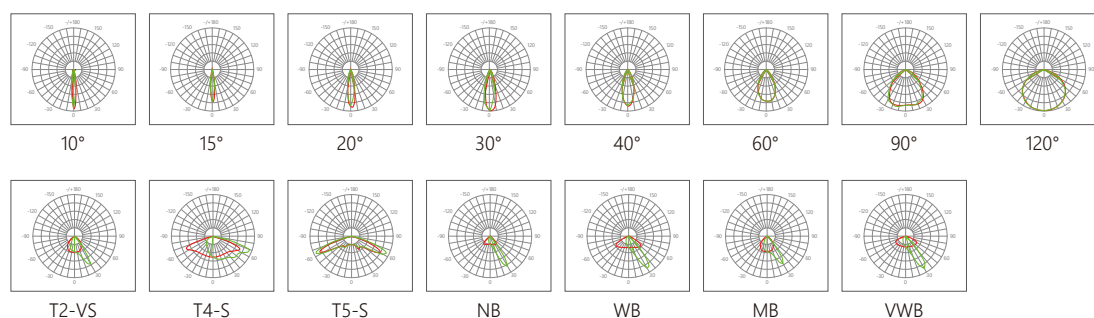

Light body rotation 0 to 350°
